Last Updated Monday, 03 December 2007

Podcast Description

As promised, Aneal is joined by Matt Hogue who is an archery lead at the Sportsman's Warehouse store in Littleton, CO. Last week Matt put a string on Aneal's Hoyt Vectrix. In this week's episode, Matt and Aneal go through the process of paper tuning a bow. You'll see how it is done, and get some explanation on what a good tear looks like, and what to do to correct when your paper is not tearing the way it should.

Next Week

Next week Anthony and Aneal are back together on an audio episode. The straight shooters are going to cover a topic that often doesn't get as much attention as it deserves - after market bow strings. Do you use the string that came on the bow when you purchased it? Have you given much thought to buying an after market string and placing it on your bow? What kind of performance improvement could you expect? Why would you take off a perfectly good string that came with your bow, and buy and install a new one? Aneal and Anthony cover these questions and a whole lot more next week.
